

ENVIRONMENTAL POLICY

Introduction

Hazer Group Limited is committed to the effective environmental management of all its exploration, development and operating activities, while at the same time minimising the social impact for the benefit of present and future generations. Our vision is to become a world leading geothermal energy company, supplying competitive zero carbon energy and base load power to the Australian market.

The Company recognises that there are potential environmental impacts associated with exploration and resource development which must be identified at the outset and managed effectively throughout the life of the project.

To achieve this, we will:

- Maintain and continually improve the Environment Management System across the organisation;
- Comply with all relevant laws, regulations and standards and aspire to higher standards within the business;
- Ensure that all employees and contractors receive appropriate training to fulfil their individual environmental responsibilities;
- Ensure that we have the necessary resources and skills to achieve our environmental commitments;
- Implement strategies to minimise pollution, manage waste effectively, use water and energy efficiently and address relevant cultural heritage and biodiversity issues;
- Formally monitor, audit, review and report annually on our environmental performance against defined objectives;
- Require that companies providing contract services to Hazer Group Limited manage their environmental performance in line with this Policy; and
- Work towards the achievement of a high level of external recognition for the quality of our on-site environmental management.

Hazer Group Limited is committed to providing the resources and support required for the achievement of best practice and the ongoing improvement of environmental management at all of our sites.

Geoff Ward
Chief Executive Officer
